

Send and Receive SMS messages

→ Receive SMS messages

QuesCom GSM gateway can receive SMS messages. They are transferred into an e-mail.

Each GSM channel has its own e-mail address. As soon as an SMS arrives, it is transformed into an e-mail and sent to the user's mail box.

→ Send SMS messages

The SMS are sent either via the Virtual Printer Driver (VPD – a QuesCom application installed on a Microsoft Windows PC) or via a Microsoft Outlook plug-in. You can then benefit from the address book.

→ Email to SMS

QuesCom solution also allows to automatically send an SMS when receiving an preformatted email.

You need to format your e-mail using SMTP protocol, it should be formatted to deliver information such as user ID and a password, destination number...

Example of SMTP message:

```
MAIL FROM: MyCompany
RCPT TO: gateway@ MyCompany.com
DATA
SUBJECT: Goods delivery
```

```
CallerID = user ID
PASSWORD = password
SMS = Recipient's number
TEXT= Dear Sir, delivery of your products will be done until Thursday- the 9th of May.
Best regards
```

```
QUIT
```

→ HTTP to SMS

There is also possibility to create an HTML link.

You need to identify a series of parameters: your name, your password, the number you are calling from, the number you are going to reach and a text of your SMS message in an URL link.

Example of HTML:

<http://192.168.198.146:8000/SMS.asp?usr=administrator&pwd=quescom&num=4848&cbnum=0612345678&smstext=SMS%20text%20with%20separators>
